

**Listing of the Claims**

Please amend Claims 1, 9 and 23, as follows:

1. **(Currently Amended)** A method in a computer system for generating a display page, the method comprising:
  - receiving a request to generate a display page, wherein
    - the display page comprises realtime information and non-realtime information,
    - realtime information comprises information capable of being retrieved or generated without significant delay, and
    - non-realtime information comprises information for which retrieval or generation will result in significant delay;
  - retrieving the realtime information to be included on the requested display page;
  - if a previously cached version of the non-realtime information is available,
    - generating the requested display page comprising the retrieved realtime information and the previously cached non-realtime information; and
  - if a previously cached version of the non-realtime information is not available,
    - generating the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display, **wherein the indication that the non-realtime information is not yet ready for display is provided in the location in which the non-realtime information is to be displayed,**
  - requesting generation of the non-realtime information,
  - caching the generated non-realtime information, and
  - generating the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page.

2. (Previously Presented) The method of claim 1 wherein said generating the requested display page comprising an indication that the non-realtime information is not yet ready for display further comprises:

including a link for requesting the display page.

3. (Previously Presented) The method of claim 1 wherein the request to generate the display page is received from a user.

4. (Previously Presented) The method of claim 1 wherein the request to generate the display page is received when a user logs on to one of the computer system and a client coupled to the computer system.

5. (Original) The method of claim 4 wherein the display page is a homepage.

6-7. (Canceled)

8. (Original) The method of claim 1 wherein the generated information includes a graphical representation of information.

9. (Currently Amended) A computer system for generating a display page of business information, comprising:

a component configured to retrieve realtime business information to be included on the display page;

a component configured to request performance of a computation to generate non-realtime business information to be included on the display page and to cache the generated non-realtime business information;

a component configured to,

if a cached version of the non-realtime business information is available,

generate the display page comprising the realtime business information and the cached non-realtime business information, and

if a cached version of the non-realtime business information is not available,

generate the requested display page comprising the retrieved  
 realtime information and an indication that the non-realtime  
 information is not yet ready for display, wherein the  
 indication that the non-realtime information is not yet  
 ready for display is provided in the location in which  
 the non-realtime information is to be displayed,  
 request generation of the non-realtime information,  
 cache the generated non-realtime information, and  
 generate the requested display page comprising the retrieved  
 realtime information and the cached non-realtime  
 information in response to a subsequent request for the  
 requested display page; and

a component configured to send to a user computer system the display page for  
 display to a user so that the user can view the realtime information if the  
 non-realtime business information is not yet ready.

10. (Previously Presented) The computer system of claim 9 wherein the  
 component configured to generating the requested display page comprising an indication  
 that the non-realtime information is not yet ready for display is further configured to  
 include a link for requesting the display page.

11. (Previously Presented) The computer system of claim 9 wherein a request  
 to generate the display page is received from a user.

12. (Previously Presented) The computer system of claim 9 wherein a request  
 to generate the display page is received when a user logs on to one of the computer  
 system and a client coupled to the computer system.

13. (Original) The computer system of claim 12 wherein the display page is a  
 homepage.

14-15. (Canceled)

16. (Original) The computer system of claim 9 wherein the generated business information includes a graphical representation of the business information.

17-21. (Canceled)

22. (Previously Presented) The method of Claim 1 further comprising:  
if a previously cached version of the non-realtime information is available,  
requesting re-generation of the non-realtime information subsequent to  
said generating the requested display page comprising the  
previously cached non-realtime information,  
caching the re-generated non-realtime information, and  
generating the requested display page comprising the retrieved realtime  
information and the cached re-generated non-realtime information  
in response to a subsequent request for the requested display page.

23. (Currently Amended) A computer-readable storage medium comprising  
program instructions executable to:

receive a request to generate a display page, wherein  
the display page comprises realtime information and non-realtime  
information,  
realtime information comprises information capable of being retrieved or  
generated without significant delay, and  
non-realtime information comprises information for which retrieval or  
generation will result in significant delay;  
retrieve the realtime information to be included on the requested display page;  
if a previously cached version of the non-realtime information is available,  
generate the requested display page comprising the retrieved realtime  
information and the previously cached non-realtime information; and  
if a previously cached version of the non-realtime information is not available,  
generate the requested display page comprising the retrieved realtime  
information and an indication that the non-realtime information is  
not yet ready for display, **wherein the indication that the non-  
realtime information is not yet ready for display is provided in**

**the location in which the non-realtime information is to be displayed,**

request generation of the non-realtime information,  
cache the generated non-realtime information, and  
generate the requested display page comprising the retrieved realtime  
information and the cached non-realtime information in response  
to a subsequent request for the requested display page.
